About me

Full-stack .NET Developer with almost 20 years of experience building modern web applications (backend in .NET, frontend in React/Next.js or Blazor). Throughout my career, I've led and delivered projects for large clients, especially in the insurance industry. I'm passionate about solving real-world problems with clean code and clear, open teamwork. I love combining proven .NET technologies with the latest AI tools (ChatGPT, GitHub Copilot) in my daily work—believing that smart automation and continuous learning are the keys to long-term success.

I value clear processes, simple solutions, and knowledge sharing—whether through mentoring or writing technical documentation..

Personal Profile
